

WINDFORM[®] XT 2.0

CLASS OF MATERIAL: Composite polyamide based material carbon filled

TECHNOLOGY: Selective Laser Sintering

Windform[®] XT 2.0 is a ground breaking carbon fiber reinforced composite 3D printing material known for its mechanical properties. It is particularly suitable in demanding applications such as motorsports, aerospace, and UAV sectors. Windform[®] XT 2.0 is an innovative material which replaces the previous formula of Windform[®] XT in the Windform[®] family of materials.

Windform[®] XT 2.0 features improvements in mechanical properties including +8% increase in tensile strength, +22% in tensile modulus, and a +46% increase in elongation at break.

The material allows for the creation of accurate, reliable, and durable prototypes and is perfect for functional applications.

APPLICATIONS:

Windform[®] XT 2.0 is the material of choice for those working in the Motorsports (end plates and fences for F1 and IndyCar, alternator covers), Automotive (functioning cooling ducts, mirrors, headlight covers), Aerospace (UAV structures, small satellites, and spacecraft components), and Design fields. The material allows for fully functional applications, as well as test fitting or "proof of concept" pieces for testing on and off the racetrack.

These applications indicated are just an example. The versatility of the product combined with the technology used allows for endless possibilities.

WHERE TO FIND WINDFORM[®] PRODUCTS

CRP Technology produces items in Windform[®] XT 2.0 and distributes the material in Europe and ROW. CRP USA produces items in Windform[®] XT 2.0 and distributes the material in the US and North America.

Both CRP Technology and CRP USA offer individually customized services for timing and method of delivery depending on the needs of the customer, anywhere in the world.

HOW TO GET WINDFORM[®] PRODUCTS

For any further information, requests for quotation, or to check delivery times, please visit our website www.windform.com or send an inquiry to info@windform.com (for Europe and ROW markets) or info@crp-usa.net (for US market).

We will be in contact to answer all inquiries.

PROPERTIES PER DENSITY UNIT			
UTS per density unit		Mpa/(g/cc)	76,43
Tensile Modulus per density unit		Mpa/(g/cc)	8138,74
Flexural Strength per density unit		Mpa/(g/cc)	121,24
Flexural Modulus per density unit		Mpa/(g/cc)	6689,33

Note: these are all indicative values. Data was generated from the testing of parts produced with Windform® XT 2.0 material under optimal processing conditions.

Standard Technical Details for Accuracy versus Tolerance:

For parts up to 6" (150 mm) the standard tolerance is: +/- 0.012 inches (0,3 mm)

For parts more than 6" (150 mm) the standard tolerance is: +/- 0.002 inches per inch (0,05 mm per 25 mm)

Example: For a 9" (229 mm) part, the standard tolerance would be: +/- 0.018 inches (0,46 mm).
